

# CONTACT INVESTIGATION

Soon we will test your family and other people who you spend a lot of time with to see if they have TB. If they do have TB germs, but are not yet sick, they will be offered pills to cure the “sleeping” TB germs and make sure they don’t get sick. Over the next few weeks we will ask you some questions about your family and people close to you so we can decide how to help your family and friends.

These questions might be:

- How many people live with you?
- Are there any children under five years old in the household?
- Is there anyone in the household with an immune system problem?
- What do you do for work?
- If a child in your family has TB, where does your child go to school and how does your child get to school?
- Is there anyone in the household with a cough, fever or weight loss?
